To develop a web application you have to put on many hats like HTML, CSS, Client and Server-side scripting languages and databases, usually scattered under individual titles. With uncountable sites and freely available material, I wrote this book due to the following reasons: - Assemble all scattered pieces in one place. This volume contains HTML/5, CSS/3, JavaScript, PHP and MySQL. Sequential instructions are provided to download and install all the required software and components to setup a complete development environment on your own pc. - Focus on inspiring practical aspect of these web technologies. - Last, but the most significant one, take the audience gradually right from creating an HTML file with a text editor, through learning HTML, CSS, JavaScript, PHP and MySQL all the way to creating a professional web project, covering static and dynamic areas. From web introduction to hands-on examples and from web application development to its deployment, this book surely is a complete resource for those who know little or nothing about the world of web development.
